

TABLEAU – PARAMETERS

- Tushar B. Kute
- <https://tusharkute.com>

What are Parameters?

- Parameters in Tableau are user-defined values that can be used to dynamically change the behavior of calculations, filters, and visualizations.
- Parameters allow users to create more interactive and flexible dashboards by enabling them to change certain aspects of the data view on the fly.

ERROR

Steps to Create a Parameter in Tableau

- 1. Go to the 'Data' menu.
- 2. Select 'Create Parameter'.
- 3. Name the parameter and choose its data type (e.g., string, integer, date, etc.).
- 4. Set the allowable values for the parameter, manually or by using a field from your data source.
- 5. Optionally, set a default value for the parameter.

Using Parameters in Calculations

Syntax for Using Parameters in Calculations

Description

- | | |
|---|--|
| <ul style="list-style-type: none">• IF [Measure] > [Parameter] THEN [Value] ELSE [Other Value] END | <ul style="list-style-type: none">• Using parameters within IF statements for conditional logic. |
|---|--|

- Parameters can be used in calculations to create dynamic and user-controlled data views.
- By referencing a parameter in a calculation formula, the value of the parameter becomes a variable that can be adjusted by the user.

Parameter Control

Tableau provides control options to manage parameters:

Parameter Control Options	Description
Slider	• Allows users to adjust values within a specified range.
Drop-down List	• Presents users with a selection of predefined values.
Input Box	• Permits users to manually enter parameter values.

Using Parameters in Visualization

Parameters can be integrated into visualizations for dynamic control

Examples of Using Parameters in Visualizations	Description
Dynamic Filters:	Parameters as filter criteria for specific data subsets.
Conditional Formatting:	Changing visual aspects based on parameter values.
Comparative Analysis:	Switching between measures or dimensions dynamically.

The background of the slide is a close-up photograph of a white pen drawing a blue line graph on a piece of paper. The graph shows a fluctuating line that generally trends upwards. The image is split vertically, with the left side showing the paper and pen, and the right side being a solid light gray background where the text is located.

Benefits of Tableau Parameters

- **Interactivity:** Enhance dashboard interactivity and user engagement.
- **Flexibility:** Allow users to explore different perspectives and scenarios within data.
- **Customization:** Tailor visualizations to meet specific user requirements.
